Professional Summary

Computer Science Engineering student specializing in Artificial Intelligence and Machine Learning with hands-on experience in building real-time AI systems. Skilled in developing, deploying, and optimizing ML models using Python, CNN, and cloud technologies. Published research in IEEE Xplore with strong focus on impactful, scalable solutions.

Education

Vellore Institute of Technology, Bhopal
B.Tech in Computer Science and Engineering

CGPA: 8.54
Sep 2023 – May 2027

Technical Skills

- **Languages:** Python, C++, Java, SQL
- **Tools/Frameworks:** Scikit-learn, NumPy, Pandas, OpenCV, Flask, React, Axios
- **Domains:** Machine Learning, Computer Vision, Data Structures and Algorithms

Projects

AI Gesture Recognition System for Emergency Assistance
CNN, YOLOv10, Computer Vision

Jun 2025 – Apr 2026
Python

- Developed a real-time gesture recognition system to assist deaf and non-verbal individuals during emergencies.
- Designed dual operational modes improving accessibility for both general users and specially-abled users.
- Implemented CNN and YOLOv10 achieving high-accuracy real-time gesture detection.
- Optimized model performance for faster inference and reliable real-time response.

Multi-Disease Prediction System (Full Stack)
Flask, React, Machine Learning, REST API

May 2026
Python, JavaScript

- Developed a full-stack web application to predict diseases based on user-selected symptoms using machine learning models.
- Built backend APIs using Flask for model inference and real-time prediction handling.
- Designed an interactive frontend using React with dynamic symptom selection and live result display.
- Integrated frontend and backend using REST APIs with Axios for seamless communication.
- Deployed backend on Render and frontend on Vercel for scalable and accessible usage.
- Implemented features including disease description, precautions, and confidence score visualization.
- **GitHub:** Project Repository
- **Live Demo:** Live Application

Blood Group Detection using Fingerprint Analysis
Machine Learning, SVM

Sep 2024 – Jan 2025
Python

- Developed an SVM-based model for predicting blood groups from fingerprint patterns.
- Designed a Streamlit interface for real-time prediction and demonstration.
- Published research work in IEEE Xplore.

Experience

Research Author and Project Lead
Blood Group Detection using Fingerprint Analysis

Sep 2024 – Jan 2025
VIT Bhopal

- Published research paper in IEEE Xplore.
- Led end-to-end development of machine learning model using SVM.
- Managed data preprocessing, model training, and system integration.

Certifications

- Microsoft Elevate Internship (AICTE) – Completed training on Microsoft Azure cloud technologies
- Applied Machine Learning in Python – Coursera
